Set your **Preferences** so that they match those shown in the illustration.

Due to variations between different versions of Dexis, the remainder of this document has been divided into two sections.

If you are using Dexis version 7, 8 or 9, proceed to the next row to configure your software.

If you are using Dexis Imaging Suite (Dexis 10), skip to the bottom row of this document for instructions on how to configure your software.

Set DEXimage Preferences as follows:

Set Video Hardware: WDM 640x480 Set Capture Device: Iris* Set Pedal at: GAME1 Set Pedal Type: Single: Down/Up** Select Done.

*This can bet set to Automatic initially. **Iris** will not populate until after you have launched the Live Video window once after camera install. **This **Pedal Type** install utilizes quick presses to toggle between live video and freeze, and a long press (hold) to save the frozen image. To capture every image (freeze, save, live), you can set **Pedal Type: Double: Capture/Move.**

Set Video Acquisition **Preferences** as follows: **Dropdown Lists:** Primary Device: Any Device* Footswitch: DENTRIX Foot Pedal Gameport Type: Single: Down/Up** **Checkboxes:**

Uncheck: Use VMR9 Rendering Check: Ignore Still Pin Uncheck: Use Capture Pin for Preview Check: Ignore Camera Holstering Select OK.

You MUST restart your computer at this time.

*If you added **Digital Doc Camera** through Extra Hardware Installs when installing Dexis Imaging Suite, select that from the **Primary Device** list. **This **Pedal Type** install utilizes quick presses to toggle between live video and freeze, and a long press (hold) to save the frozen image. To capture every image (freeze, save, live), you can set **Pedal Type: Double: Capture/Move**.
